

Taking over the world, one step at a time.

BUGBRAIN™

Initiate

Build your first walking, talking, sensing, thinking robot! The BugBrain™ walking robot kits, for ages 10 and up, are an initiation into the world of robotics, electronics, and computer programming.

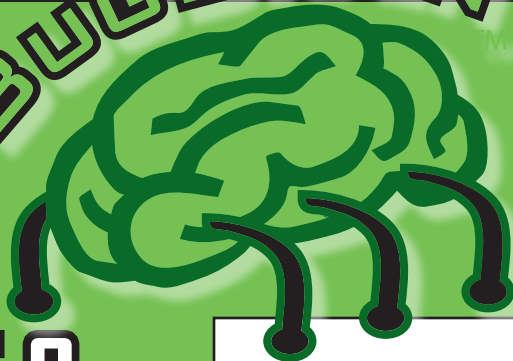

Inspire

Give young minds an exciting way to learn electronics and programming while they build their own personalized creation. Inspire them to design their BugBrain's personality and appearance. After trying the sample programs, get creative and write your own. The BugBrain design has an expansion connector so that you can more easily add new capabilities to your creation.
